5. Conclusion

## Objective

1. Monitor and analyse daily, weekly, and monthly sales performance.
2. Identify key factors affecting sales trends and customer retention.
3. Understand customer purchasing patterns and preferences.
4. Optimize inventory levels based on sales data.
5. Improve inventory turnover and reduce stockouts.
6. Evaluate the impact of marketing campaigns on sales.
7. Refine strategies for better ROI and customer engagement.

## Project Learning

Developed a user-friendly interface for tracking and analyzing sales data.

Enabled deep data exploration and customization using filters and slicers.

Integrated multiple data sources and performed calculations for accurate visualizations.

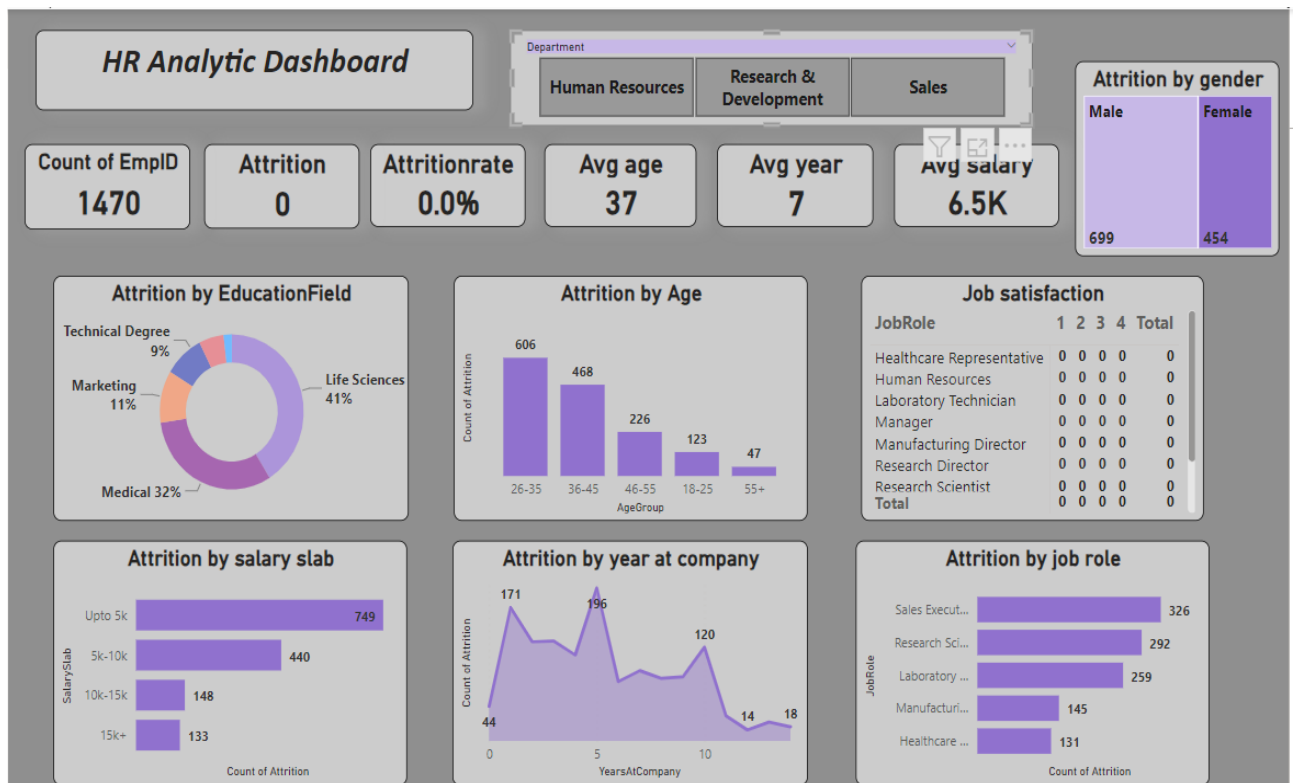

Utilized various chart types to present data in an easily understandable manner.

Applied learnings from HR projects to improve customer retention and sales team productivity.

## Requirement Analysis

This requirement analysis aims to provide a comprehensive understanding of the needs and constraints involved in developing HR Analytic dashboard, ensuring it effectively meets the objectives and delivers value to the stakeholders.

All Visualization like All Charts which is there in the Dashboards

## Conclusion

The requirement analysis provides a comprehensive understanding of the needs and constraints involved in developing the e-commerce sales dashboard, ensuring it effectively meets its objectives and delivers value to stakeholders. Integrating learnings from related projects enhances the overall performance and user satisfaction, making the dashboard a powerful tool for sales analysis and decision-making.
